

How to Play on Mint's Minecraft Server

Welcome to **Mint's Awesome Modpack!**

This simple guide will help you (or your kids!) join our friendly Minecraft world at **57.129.38.77:2496** — step by step.

For Parents

This guide helps your child safely join a **private Minecraft Java Edition** server using trusted mods from **CurseForge**.

Everything here is safe and official. If something looks different, don't worry — just restart Minecraft and follow the same steps again.

Before You Begin

Before we start:

- You need to **own Minecraft: Java Edition** for **PC or Mac**.
(This guide won't work with Minecraft Bedrock — that's the version for consoles, tablets, and phones.)
- Make sure you can launch **regular Minecraft Java Edition** at least once.
- You'll need to sign in with the **Microsoft account** that owns Minecraft Java when asked.

Step 1: Get the Modpack

Let's grab the files you need so Minecraft can connect to the server.

1. Open this link in your web browser:

👉 [Mint's Awesome Modpack on CurseForge](#)

2. Click **"Install via CurseForge App."**

- This will open the **CurseForge App** and start downloading everything you need.

3. If you don't have the CurseForge App yet, it'll ask you to install it.

- Follow the instructions, then come back and click **"Install via App"** again.

Step 2: Launch the Modpack

Now we'll open Minecraft through CurseForge.

1. In the **CurseForge App**, go to **My Modpacks**.
2. Find **Mint's Awesome Modpack**.
3. Click **Play** — this opens the **Minecraft Launcher**.
4. The launcher might ask you to **sign in** — use your usual **Microsoft account** that owns Minecraft.
5. When signed in, click **Play** again to start the game.
6. You'll see a message saying:

"You are about to play a Minecraft: Java Edition installation that has been modified."

*That's **normal** — it just means Fabric and the helper mods are running.*

✅ Click **Play** again to continue.

7. When Minecraft starts, the **Essential Mod** might pop up asking to update itself.
 - That's also **normal and safe**.
 - You can say **Yes** to update or **No** to skip — either choice is fine.

Step 3: Join the Server

Time to connect and start playing!

1. From the Minecraft main menu, click **Multiplayer**.
2. You'll see a message saying:

⚠️ *Caution: Third-Party Online Play*

*That's **fine and expected** — it just means you're joining a private world.*

- ✅ Click **Proceed** to continue.
 - (Optional) Tick **"Do not show this screen again"** if you don't want to see it each time.
3. Click **Add Server**.
 4. Fill in:
 - **Server Name:** Mint's Awesome Server
 - **Server Address:** `57.129.38.77:2496`
 - **Server Resource Packs:** set this to **Enabled** (instead of **Prompt**) so you automatically get the server's textures and sounds.
 5. Click **Done**, then select the server and click **Join Server**.

Tips

- Make sure you have the **newest version** of **Mint's Awesome Modpack**.
- The server uses a helper called **AutoModpack**, which makes sure everyone has the right mods.
 - ⌚ *The first time you connect, it might take a few minutes to download and set things up — that's normal!*

- If Minecraft shows a “version mismatch” or “missing mod” warning, just restart — AutoModpack will fix it.
- To leave and come back later, simply open the CurseForge App again and click **Play**.

You're Ready to Play!

That's it!

You're ready to explore, build, and have fun on **Mint's Awesome Server** with friends and family.

See you on **Mint's Awesome Server!**
